Segnata da solenni inaugurazioni, da lunghe chiusure, da dispersioni delle collezioni e fortunosi recuperi la ormai quasi secolare storia della Galleria comunale d'arte moderna e contemporanea di Roma vede ora con questa mostra una ulteriore riaffermazione della sua importanza e del suo prestigio per la comprensione delle vicende dell'arte a Roma in special modo nei primi cinquanta anni del secolo scorso.

The latest addition to No Starch Press's EduManga series, The Manga Guide to Biochemistry uses Japanese comics, clear explanations, and a charming storyline to explain the basics of biochemistry. This volume begins with a discussion of the cells that make up living beings, as well as the basics of protein synthesis, metabolism, energy production, and photosynthesis. It goes on to cover ecosystems and material cycles; the mechanisms of respiration; lipids, cholesterol, and blood types; and the roles and structures of enzymes and proteins. Readers explore genes and DNA: the differences between biochemistry and molecular biology; and the mystery surrounding the origin of the cell, all with the aid of original Manga cartoons. This EduManga title is co-published with Ohmsha, Ltd. of Tokyo, Japan, and is one in a series of translations from Ohmsha's bestselling Japanese originals"--

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State--and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years--it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Two unaccompanied children travel across the Mediterranean in an overcrowded boat that has been designed to only make it halfway across... A 63-year-old man is woken one morning by border officers ' acting on a tip-off ' and, despite having paid taxes for 28 years, is suddenly cast into the detention system with no obvious means of escape... An orphan whose entire life has been spent in slavery -- first on a Ghanaian farm, then as a victim of trafficking -- writes to the Home Office for help, only to be rewarded with a jail sentence and indefinite detention... These are not fictions. Nor are they testimonies from some distant, brutal past, but the frighteningly common experiences of Europe ' s new underclass -- its refugees. While those with ' citizenship ' enjoy basic human rights (like the right not to be detained without charge for more than 14 days), people seeking asylum can be suspended for years in Kafka-esque uncertainty. Here, poets and novelists retell the stories of individuals who have direct experience of Britain ' s policy of indefinite immigration detention. Presenting their accounts anonymously, as modern day counterparts to the pilgrims ' stories in Chaucer ' s Canterbury Tales, this book offers rare, intimate glimpses into otherwise untold suffering.

'An absolute gem. Funny, incredible and brilliantly reported, in Ed Hawkins the sports world has its own Jon Ronson.' - Will Store The bizarre true story about the cosmic side of sports Ever wondered if the mind tricks used by Luke Skywalker or his Star Wars brethren were real? Ed Hawkins did. A Jedi-wannabe and sports nut, he pondered: what if a coach or athlete had tried to harness such mysterious powers? They would be unstoppable. This set Ed off on an extraordinary adventure across the West Coast of America in search of a superhuman sports star. He discovers cosmic thinkers who, back in their 1960s heyday, believed that through the power of thought alone a superhuman could be created. One that could see into the future, slow down time and control minds. So successful were their tactics that they attracted the attention of the US government. Meanwhile in Russia their Soviet counterparts were employing equally bewildering brain power. Their goal? To win the Cold War. And so from the 1970s and into the Eighties the underground free-thinking movement became a fully-funded state secret in an 'inner space race' between the US and the Soviet Union. Both sides attempting to create the perfect human killing machine. It worked. Sort of. Instead of building a super soldier, the mystics from both sides came together to preach peace and love to their political paymasters. After the thaw, the search for the superhuman sports star began again and continues to this day. In The Men on Magic Carpets Ed goes deep into a secret network of supernatural sages and is told about a mysterious American football coach who made it to the top by teaching his players The Force. But can he be found? Will he admit to what he truly believes? And how does our intrepid author cope with his own brush with the Dark Side as the shadowy military once again attempt to use the mystical powers for ill?

In the second edition of Principles I have attempted to maintain the emphasis on basics, while updating the material to include more recent results from the literature. There is a new chapter providing an overview of extrinsic fluorophores. The discussion of timesresolved measurements has been expanded to two chapters. Quenching has also been expanded to two chapters. Energy transfer and anisotropy have each been expanded to three chapters. There is also a new chapter on fluorescence sensing. To enhance the usefulness of this book as a textbook, most chapters are followed by a set of problems. Sections which describe advanced topics are indicated as such, to allow these sections to be skipped in an introduction course. Glossaries are provided for commonly used acronyms and mathematical symbols. For those wanting additional information, the final appendix contains a list of recommended books which expand on various specialized topics.' from the author's Preface

For those interested in understanding the nursing process within a framework for providing holistic care.

Biophoton emission now belongs to a topical field of modern science: It concerns a weak light emission from biological systems. Such molecular events are clearly compatible with collective phenomena as shown by recent developments in the life sciences such as the chaos theory. This book is concerned with the 'optical window' of biological interactions and in view of their correlations to many biological functions they provide a powerful, non-invasive tool of analysing biological systems. Topics include food science, pollution, efficacy of drugs including the treatment of cancer and immune diseases, and communication phenomena such as consciousness.The collection of articles in this book covers the historical background, the physics of biophoton emission, those biological phenomena which show evidence of a 'holistic' character, and finally discusses applications and biological evolution. This volume serves to bring researchers up-to-date on the subject and draws attention to the many exciting findings that are widely scattered in the scientific literature.

This unique visual reference presents more than 750 brilliant, four-color images of bacterial isolates commonly encountered in diagnostic microbiology and the methods used to identify them, including microscopic and phenotypic characteristics, colony morphology, and biochemical properties. Chapters cover the most important bacterial pathogens and related organisms, including updated taxonomy, epidemiology, pathogenicity, laboratory and antibiotic susceptibility testing, and molecular biology methodology Tables summarize and compare key biochemical reactions and other significant characteristics New to this edition is a separate chapter covering the latest developments in total laboratory automation The comprehensive chapter on stains, media, and reagents is now augmented with histopathology images A new Fast Facts chapter presents tables that summarize and illustrate the most significant details for some of the more commonly encountered organisms For the first time, this easy-to-use atlas is available digitally for enhanced searching. Color Atlas of Medical Bacteriology remains the most valuable illustrative supplement for lectures and laboratory presentations, as well as for laboratorians, clinicians, students, and anyone interested in diagnostic medical bacteriology.

This volume explores the applications of reporter gene technology and the methodologies needed for their effective implementation. The chapters in this book cover practical topics such as how to integrate reporter constructs into cellular models, viral delivery, splicing applications, in vivo imaging, and a guide to the use of multi-cistronic constructs. Additionally, chapters also include detailed mechanistic uses of reporter genes in cellular pathways, and a look at project and data management of screening applications. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and thorough, Reporter Gene Assays: Methods and Protocols is a valuable resource for anyone who is interested in learning more about reporter genes.

Computational methods are rapidly becoming major tools of theoretical, pharmaceutical, materials, and biological chemists. Accordingly, the mathematical models and numerical analysis that underlie these methods have an increasingly important and direct role to play in the progress of many areas of chemistry. This book explores the research interface between computational chemistry and the mathematical sciences. In language that is aimed at non-specialists, it documents some prominent examples of past successful cross-fertilizations between the fields and explores the mathematical research opportunities in a broad cross-section of chemical research frontiers. It also discusses cultural differences between the two fields and makes recommendations for overcoming those differences and generally promoting this interdisciplinary work.

Market-Driven Management adopts a broad approach to marketing, integrating the strategic and operational elements of the discipline. Lambin's unique approach reflects how marketing operates empirically, as both a business philosophy and an action-oriented process. Motivated by the increased complexity of markets, globalisation, deregulation, and the development of e-commerce, the author challenges the traditional concept of the 4Ps and the functional roles of marketing departments, focusing instead on the concept of market orientation. The book considers all of the key market stakeholders, arguing that developing market relations and enhancing customer value is the responsibility of every member of the organization, and that the development of this customer value is the only way for a firm to achieve profit and growth. New to this edition: - Greater coverage of ethical issues and corporate social responsibility; cultural diversity; value and branding and the economic downturn - Broad international perspective - Thoroughly revised to reflect the latest academic thinking and research With its unique approach, international cases and complementary online resources, this book is ideal for postgraduate and upper level undergraduate students of marketing, and for MBAs and Executive MBAs.
