

Anatomy I Mcqs

Anatomy: 1800 Multiple Choice Questions contains 1,800 multiple choice questions related to anatomy. The questions are supported by illustrations and arranged into nine sections: Upper Limb, Lower Limb, Thorax, Abdomen, Pelvis and Perineum, Head and Neck, Nervous System, Histology, and Embryology. In the Histology section, the questions in each of the six standard formats are arranged in the same sequence, as follows: the Cell; the Tissues (commencing with the Epithelia and ending with Nervous Tissue); and the Systems (commencing with the Cardiovascular and ending with the Reproductive). Readers will encounter questions dealing with the spine of the scapula, the vein that pierces the clavipectoral fascia, branch of the axillary artery, and the quadriceps femoris muscle. Other topics include muscle pair inserted into iliotibial tract, bony prominences on which you kneel, muscle that flexes hip and knee, and the chromosomal formula of the oocyte at ovulation. This text also discusses the rate of regeneration of peripheral nerves following injury; structures that occupy the carotid sheath; and the location of sphincter urethrae. This book will be extremely valuable to students and teachers of anatomy.

This second edition provides 2400 multiple choice questions on human

anatomy and physiology, and some physical science, separated into 40 categories. The answer to each question is accompanied by an explanation. Each category has an introduction to set the scene for the questions to come. However, not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The questions have been used in end-of-semester examinations for undergraduate anatomy and physiology courses and as such reflect the focus of these particular courses and are pitched at this level to challenge students that are beginning their training in anatomy and physiology. The question and answer combinations are intended for use by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition and dietetics, health sciences, exercise science, and students taking an anatomy and physiology course as an elective.

Compiled with an aim to answer the questions related to MCQs in anatomy.

Multiple Choice Questions in Ophthalmic and Neuroanatomy was written from notes that made by the author while preparing for the College of Ophthalmologists' primary examination. At the time it was difficult to gauge the standard expected as there were no questions available. This book aims to help many candidates who need to learn this sort of anatomy and hopes that its appeal extends beyond budding ophthalmologists and general surgeons to include optometrists and orthoptists. The questions deal with the following topics: osteology; anatomy of the head and neck; vascular anatomy; neuroanatomy; orbital and autonomic anatomy; ocular adnexae and extraocular muscles; cranial nerves and visual pathway; ocular anatomy; and embryology.

This edition of MCQs in Anatomy is timed to follow the publication of the fifth edition of Essential Anatomy, its companion volume. It contains additional clinical material and the text has been revised. The embryology chapter has been removed but the embryology of individual organs expanded where appropriate. The format of the questions has been changed from four to five options in

Mcqs In Anatomy (3Nd Edition)

A revision aid for radiology trainees world-wide studying for their professional examinations in the field.

Radiology has advanced at a great pace, allowing us a greater appreciation of anatomical detail. This has in turn placed a greater demand on the trainee radiologist's knowledge of anatomy. With these facts in mind the authors have written this collection of MCQs on

radiological anatomy for the FRCR Part One exam. The questions are closely modelled on the examination, highlighting favoured exam topics. To make efficient use of trainee radiologists time extended answers have been prepared.

Multiple Choice Questions in Anatomy and Neurobiology for Undergraduates is a collection of multiple choice questions in anatomy and neurobiology for undergraduate students. Questions are grouped for each visceral system and the nervous system. In the case of the body framework (including peripheral nerves and blood vessels), however, a regional grouping is used. Each question has the corresponding correct answer. This book is comprised of eight chapters covering the upper limb, head and neck, musculoskeletal trunk, lower limb, cardiovascular and respiratory systems, gastrointestinal and genito-urinary systems, and neurobiology. Each chapter contains three types of questions designed to test knowledge in different ways. Type A items involve choosing a single correct answer from five available choices. Type L items are used to elicit information on the cause-effect relationship between sets of data. Type E items call for the perception of one or more correct responses among four alternatives, and the

responses may be grouped in five different ways. Most questions are also accompanied by an indication of the percentage of students who obtained the correct answer on occasions of previous settings and by a biserial correlation coefficient (r biserial), indicative of the capacity of the question to distinguish between more able and less able students. This monograph is primarily intended for medical undergraduates and will also be useful to academic anatomists building up their own question banks.
