A treasury of thirty-seven years of flying and teaching experience in the world's most popular executive aircraft. Tom Clements' articles, stories, and operating tips all compiled into one reference book. This information will be invaluable for current or future pilots of King Air airplanes.

Action taken by the Ministry of Defence to balance its overall budget in the short term following the Strategic Defence and Security Review has contributed to a near £500 million in-year cost increase in the 15 largest defence projects. When coupled with previous cost growth, these projects are now £6 billion above

forecasts made when the main investment decisions were taken. For the third successive year, central planning decisions taken by the Department, including delaying various projects, have had the biggest impact on cost growth, accounting for £237 million of the increase. Of this, £113 million relates to decisions to enhance capability. Macro-economic factors, such as adverse foreign exchange rates, accounted for £176 million of the increase. Cost overruns from project-specific technical issues accounted for £53 million. During 2010-11, there was a total increase of 30 months (with an average two months per project) in the forecast time to complete these projects and bring them into service. This brings the total delay on all 15 projects to 26.8 years. Long-term cost analysis by the NAO has shown that the difference between the approved and forecast costs of all projects which have had their main

investment decision approved since 2000 is £10.6 billion (an 11.4 per cent increase). Additional costs have been avoided by reducing the amount of equipment the Department originally planned to buy. Had the Department not reduced equipment numbers, cost growth could have been between £18.2 billion and £19.4 billion (approximately 20 per cent) above the approved costs.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides

a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and
